Objective

To work in an environment which encourages me to succeed and grow professionally where I can utilize my skills and knowledge appropriately.

Experience

Advanced Embedded Systems 01/02/2025 – 09/25

Internship

During my Advanced Embedded Systems internship, I worked on STM32- based microcontroller development, writing and testing firmware in C for peripherals such as GPIO, UART, I2C, SPI, and ADC. I assisted in hardware debugging, board bring-up, and troubleshooting using tools like ST-Link, oscilloscope, and logic analyzer. I implemented timers, interrupts, and communication interfaces, while also using Git for version control and maintaining proper documentation.

Univision Technologies Pvt Ltd

Graduate Trainee

- Good technical knowledge within the field of Firmware.
- Good understanding of BIOS and UEFI boot sequence.
- Good technical knowledge of Intel development boards and Windows OS.
- Worked on flashing and updating the BIOS using Dediprog SF 100.
- Building and working on firmware file and adding debug statements.

Technical Skills

Programming Languages:C , Embedded C,C++,Linux(basics),Python(basics).

Software Tools : Git, RUFUS, Disk part, EDK2 emulator.

Protocols : UART, i2C, SPI, LPC.

Operating System : Windows 10, windows 11, Ubuntu.

Understanding of BIOS, UEFI and windows booting sequence.

Good knowledge on the PC architecture and it's peripheral components.

Tools : CPU -Z, Dediprog SF100, Oracle VM box.

Education

VAAGDEVI ENGINEERING COLLEGE **2025**

B.Tech | Computer Science and Engineering (Data Science)
7.1 CGPA

SHIVANI JUNIOR COLLEGE **2021**

Intermediate/12th standard
89.8%

VIGNAN HIGH SCHOOL **2019**

10th Standard
90%

Projects

AI Generated V/S Real Image Classifier

This project aims aims to develop a deep learning model to distinguish between AI-generated and real images. Applications include content authentication and enhancing digital security.Developed a deep learning model to distinguish AI-generated images from real images.Used CNN techniques to detect unique patterns in synthetic images.

Advanaced Embedded System:

1. LED Blinking using STM3

Implemented a basic GPIO output project on an STM32 microcontroller to blink an LED using HAL libraries in STM32CubeIDE. Gained understanding of clock setup, GPIO configuration, and delay functions.

2. Button-Controlled LED on STM32

Built a simple input–output interface where an LED is controlled using a push button. Learned GPIO input configuration, pull-up/pull-down settings, and event handling using polling/interrupts

Genetic Classification of an individual by using Machine Learning

Built machine learning models to classify individuals using genetic data.Applied dimensionality reduction for handling high-dimensional genetic sequences.Predicted traits and disease risks from genetic patterns.

Soft Skills

- Problem solving
- Communication
- Time management
- Teamwork

Declaration

I hereby declare that all the above mentioned information is true and correct to the best of my knowledge.

Place

Hyderabad Telangana.
