

K Arshad Naveed

ABOUT

- Hands on C/C++, Java, JavaScript and Python development with high analytical and debugging skills.
- 8+ years in Embedded devices, Routers, L2/L3 features, sockets, TCP/IP, Socket programming, OOPS, Multithreading, HTTP, HTTPS, SQL and REST apis.
- Good understanding of Computer Science subjects OS, Networking, Digital Logic, Data Structures and more.
(GATE(CS) 2007 All India Rank: 33)
- Master of Engineering(CSE), from Indian Institute of Science (IISc), Bangalore.

EXPERIENCE

Infosys, Hyderabad – Consultant

September 2025 – April 2026

- Worked on analysis of different components in C++ as part of migration to Java. Studied different components on their functionality and part played in communication flow. Used **C/C++** for this project

Pure Soft Solutions, Pune – Principal Consultant

August 2023 – September 2025

- Worked on Axis cameras, to develop and install code which determines IP address of the device by parsing commands, sends HTTP GET and POST messages. Developed code to run a series of functionalities like MD5 and SHA1. Used **C/C++** for this project
- Studied many functions like the Fejer kernel, a mix of sine and cosine functions using matplotlib. Used **Python** for this project

Independent Tutor – CSE

July 2016 – August 2023

- Tutored CS students on Computer Networks, Computer Organization, Operating Systems, Digital Logic, Data Structures and File Systems using **Upwork** as medium.(Non IT experience)

HCL Technologies, Chennai – Lead Engineer

October 2014 – July 2016

- Worked in a maintenance project for HFR router involving both customer issues and planned fixes at PLIM level (L2 layer). Some involved **32 bit to 64 bit changes** template. **Language:C/ C++**
- Worked in a development project for Fretta router at FPGA level involving memory management. **Language:C/ C++**

[24]7, Bengaluru – Member of Technical Staff

September 2012 – June 2013

- Worked on PxAssist, flagship product of the company developing features at chat level.
- Worked on PxVoice, bringing voice features to customer interaction.
- Used Java for implementation in both projects.

Juniper Networks, Bengaluru – Member of Technical Staff

August 2009 – May 2012

- Developed tcpdump/wireshark extension for CCC(Juniper's protocol) by processing(decoding) packets to visualize their significance. Used pointers, structures in this project. Same code had to be used for both tcpdump and wireshark extensions with limited changes for them. **Language: C/C++**
- Delivered HTTP to HTTPS redirect using server socket and parsing incoming packets. The HTTP server's functionality was to use 301 redirect to legacy HTTPS server. **Language: C/C++**
- Delivered Single Sign-On for various devices related to Wan Acceleration and Secure Access using public/private keys. SAML library was used for this feature and a single click was sufficient to access related device's website. **Language: C/C++**
- WAN acceleration using compression, caching and encoding techniques at different layers of network stack.
- Had good experience of debugging(gdb) while bug fixing existing code.
- Linux machines used to write/enhance code.

Wipro Technologies, Chennai – Associate Software Engineer

June 2006 – March 2007

- Modified screen features using AS/400 while working for JCPenney client.

EDUCATION

Indian Institute of Science, Bangalore – *M.E.(C.S.E.)*

August 2007 – July 2009

Project #1: Pointer Analysis for JavaScript

The attempt was one of the foremost for JavaScript: We collected tokens from source code and applied inference rules to arrive at the end result.

Project #2: Detection and removal of conflicts for firefox add-ons

We studied existing cases of add-on conflicts and proposed solutions to them. Though there were very few instances of the conflicts, it was a very good case study to understand threats of providing a common framework to develop add-ons.

S.V.University College of Engg., Tirupati – *B.Tech.(C.S.E.)*

August 2002 – July 2006

Project: Logical checkpointing. By taking less physical checkpoints and more logical checkpoints, the storage and time taken for checkpoints were saved.

Language: C/C++
