

Career Objective

To work in an environment which encourages me to succeed and grow professionally where I can utilize my skills and knowledge appropriately.

Professional Summary

AI and ML engineering graduate with experience in Python development, machine learning projects, and enterprise application support. Currently supporting defense Control Centre applications at Bharat Electronics Limited, focusing on system monitoring and troubleshooting. Internship experience at NRSC (ISRO) working on satellite image enhancement using deep learning. Skilled in Python, SQL, REST APIs, and data analysis.

Skills

- **Programming:** Python, C, SQL
- **Backend Development:** Flask(basics), API integration
- **Database:** MySQL, SQL
- **Data Analysis & Processing:** Pandas & NumPy, Data Cleaning, Data Extraction
- **Core Concepts:** REST APIs, Object-Oriented Programming (OOP)
- **Machine Learning & AI Exposure:** Model Training (Basics), NLP Summarization, Generative AI Concepts
- **Gen AI:** Model Training, Prompting, Model Implementation

Experience

Software Engineer (Application Support) | GVR Techno Labs Pvt Ltd *Oct 2025 – Current*

- Supporting enterprise-level applications for a **defence-related Control Centre project (Himashakti)** at Bharat Electronics Limited.
- Worked on Control Centre (CC) applications for the Mobile Repair Station (MRS) at Bharat Electronics Limited as part of the Himashakti defence project.
 - Developed and supported CC web applications using Node.js, HTML, CSS, JavaScript, and Oracle Database to monitor workflow health status and verify whether system processes were functioning correctly.
 - Built a network-check application using Java Swing and IP configuration files to retrieve and display complete information about connected entities.
 - Assisted in troubleshooting application issues, monitoring backend workflows, and supporting mission-critical control centre systems used in defence operations.
 - **Skills / Tools:** Node.js, HTML, CSS, JavaScript, Oracle Database, Java Swing, Linux Server Handling

Machine Learning Intern | National Remote Sensing Centre (NRSC, ISRO) *Nov 2023 – Apr 2024*

- Implemented SRGAN (Super-Resolution Generative Adversarial Network) to enhance Sentinel-2A satellite images.
- Improved spatial resolution from 20 m (R20 m) to 10 m (R10 m).
 - Trained GAN models using paired low-resolution and high-resolution images.

- Worked with large image datasets and model optimization techniques.

Skills / Tools used: Python Programming, Deep Learning (GANs / SRGAN), Image Processing, Model Training & Optimization, Data Preprocessing, Data Segmentation

Academic Project

Early Detection of Parkinson's Disease Using Machine Learning

- Designed and implemented a machine learning system to predict Parkinson's disease using biomedical voice measurements.
- Applied algorithms including KNN, SVM, Random Forest, and XGBoost.
- Achieved 92.31% accuracy using Random Forest.
- Performed data preprocessing, feature selection, and model evaluation.
- Project published in the Indian Patent Office Journal, demonstrating innovation and real-world applicability.

Skills / Tools used: Machine Learning Algorithms, Python & Scikit-learn, Data Preprocessing & Feature Selection, Model Evaluation & Accuracy Optimization, Biomedical Data Analysis, Research & Technical Documentation

Education

Computer Science & Engineering (**Artificial Intelligence and Machine Learning**) | B. Tech | Nalla Malla Reddy Engineering College

Certifications

- Certified in Programming with Python by Internshala.
- SQL Course Certification by Udemy.
- Programming for Everybody (Python) by HackerRank.
- Certified Industry-Oriented Summer Internship Program (Data Science & Full Stack Web Development) by Swecha Telangana.
