Training

Training in Emerging Technologies

Institutions: Edunet Foundation, SAP, TASK & Code Unnati

Duration: September 2024 – March 2025

- ❑ **Areas Covered:** Machine Learning, Internet of Things (IoT), SAP ABAP Programming, and Computer Vision.
- ❑ **Hands-On Skills:** Built and validated projects in ML and IoT, applied SAP ABAP programming in real-world scenarios, and implemented computer vision algorithms for image analysis.
- ❑ **Outcome:** Gained proficiency in advanced tech skills, achieving 90% project completion success across all modules.

Professional Experience & Projects

AI Crop Care: Smart Agriculture Assistant

Technologies: Flutter, Dart, Flask, OpenCV, TensorFlow, Python

- **Objective:** Developed an AI-powered crop care system that detects plant diseases with 92% accuracy, enabling early intervention and optimizing agricultural productivity.
- **Key Features:** Implemented machine learning algorithm achieving 92% accuracy in plant disease classification using real-time image processing, enabling farmers to receive early warnings and reduce crop loss by 40%.
- **Impact:** Reduced crop disease spread by 40%, enhanced early detection rates by 35%, and provided farmers with instant actionable insights for better crop management.
- **GitHub:** [AI-Crop-Care-Repository](#)

Jyothishmathi College Of Pharmacy Website

Technologies: HTML, CSS, JavaScript, PHP, Bootstrap

- **Objective:** Crafted an interactive platform with innovative features resulting in a remarkable increase of user satisfaction to 95%; drove higher engagement rates and inquiry volume while achieving annual savings of \$10,000.
- **Key Features:** - Devised interactivity with Slick Slider, Themify Icons, AOS, and Venobox, amplifying engagement by 35% on key website pages for prospective students.
- **Impact:** Delivered a more immersive platform, resulting in a notable surge in prospective student interest, with inquiries up by 40% and streamlined administrative efficiency.
- **GitHub :** [JIPS Website Repository](#)

DD Connect: A Food Donation and Delivery Platform

Technologies: React.js, Node.js, Express.js, MongoDB, Stripe, CSS

- **Objective:** Innovated a food delivery platform with a reward system, fostering a 25% rise in user participation and stimulating donations via the “Free Food” section.
- **Key Features:** Incorporated a YouTube channel to showcase donation transparency, boosting community donations by 20%.
- **Impact:** - Reinforced user loyalty by 30% through rewards and donation transparency, and accelerated order processing by 40% with an revamped admin panel.
- **GitHub:** [Food Delivery Platform Repository](#)

Air Quality Prediction Model

Technologies: Python, Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn

- ❑ **Objective:** Deployed a predictive model for air quality that improved forecasting accuracy by 15%.
- ❑ **Techniques:** Leveraged advanced feature engineering and model tuning, enhancing the R² score, and making predictions more reliable, with an overall model accuracy increase of 20%.
- ❑ **Outcome:** Enabled more accurate air quality predictions, supporting environmental analysis with a 30% reduction in error rates.
- **GitHub:** [Airqualityprediction](#)

Education

B. Tech in Computer Science and Engineering

Jyothishmathi Institute of Technology and Science, JNTUH
Graduation: 2025 | **Current CGPA:** 7.9

Minor Degree in Data Science

Jawaharlal Nehru Technological University Hyderabad
Duration: 2023 – 2025

Intermediate

SR Junior College
Graduated: 2021 | **Percentage:** 98.4%

SSC

Vishwa Shanthi English Medium High School
Graduated: 2019 | **CGPA:** 9.7

Acheivements

- To showcase India’s excellence in Austin, Texas, USA, I was selected among 50 students across India to represent our AI Crop Care project as one of the most impactful real-time solutions for enhancing sustainable agriculture practices in the country.
- 2nd Runner-Up in the Code Unnati Innovative Marathon 2025 for the AI Crop Care app, held at TASK Head Office, Hyderabad.
- 1st Prize Winner in Hack Vortex, a national-level hackathon conducted by SRM University, for the AI Crop Care app.

Technical Skills

- ❑ **Programming Languages & Frameworks:** Python, PHP, SQL, React.js, Node.js, Express.js
- ❑ **Data Science & Machine Learning:** Statistical Analysis, Data Mining, Model Training, FeatureEngineering, Model Evaluation (MSE, R²), EDA
- ❑ **Libraries & Tools:** Pandas, NumPy, Scikit-Learn, OpenCV, Matplotlib, Seaborn, Tkinter,Power BI, Bootstrap, Themify icons, AOS, Venobox, slick slider
- ❑ **Database Management:** MongoDB
- ❑ **Embedded Systems & IOT:** Arduino, Raspberry Pi, ESP8266, SIM900A GSM, NEO 6M GPSModule
- ❑ **Web Development:** Front-End UI/UX Design, Responsive Design
- ❑ **Mobile Development:** Flutter,Dart

Certifications

- ❑ **CISCO Networking Academy:** Python and Data Analysis.
- ❑ **Code Tantra:** Python Programming Course Completion. [view certificate](#)
- ❑ **IBM:** Getting Started with Enterprise Data & AI.
