
HRUTIK BHONG

Pune, India | +91-9637683226 | hrutikbhong28@gmail.com | <https://www.linkedin.com/in/hrutikbhong>

Professional Summary

Results-oriented software developer with 4.2 years of experience at Dassault Systems. Proficient in C and C++ programming, Object-Oriented Programming, STL, Data Structures and Algorithms. Known for delivering high-quality code and solutions to meet client requirements and exceed expectations.

Work History

Software Engineering Specialist - Feb 2025 - Present

Dassault Systemes

- Developed an inbuilt Teams channel to improve internal communication within the company, offering a centralized platform for collaboration across teams and departments.
- Build the platform using C++, Java, and JavaScript, ensuring cross-platform compatibility for both desktop and mobile devices with optimal performance and user experience.
- Implement real-time messaging and notifications to keep employees updated on important communications and events.
- Integrate the platform with existing company systems, such as project management tools, calendars, and file-sharing platforms, for seamless workflow and easy access to data.
- Design the platform with scalability in mind, ensuring support for large teams and high data throughput without compromising performance.
- Prioritize security by incorporating data encryption, user authentication, and secure communication protocols to protect sensitive company information.
- Customize the user interface to align with the company's branding and visual identity, delivering a consistent user experience.
- Optimize the platform for compatibility across desktop and mobile devices, enabling employees to stay connected and productive from anywhere.
- Continuously enhance the platform based on user feedback and evolving business needs to ensure it meets future demands.

Senior Software Engineer - July 2022 - Jan 2025

Persistent Systems Limited

- Designed, implemented, and maintained software solutions for enterprise asset intelligence products, including barcode scanning, RFID systems, and mobile computing applications, while ensuring seamless integration with hardware.
- Led the full software development lifecycle, from requirements gathering and design to coding, deployment, and testing, delivering high-quality software on schedule.
- Developed and implemented the Bitlocker feature using C++ and OOP concepts, optimizing performance across Linux and Windows environments.
- Identified and resolved legacy issues, significantly improving software performance and reducing computation time through optimized algorithms.
- Created reusable components to streamline development efforts across multiple projects and enhance long-term software stability.
- Collaborated with cross-functional teams and clients to define solution requirements, ensuring alignment with business needs and industry trends.

Software Engineer Intern - February 2022 - July 2022

Persistent Systems Limited

- Contributed to the development and optimisation of software applications using Java, C, C++, and Python.
- Worked closely with senior developers to implement features, troubleshoot issues, and enhance code performance. Documented processes and solutions to support ongoing project requirements and facilitate team collaboration.

Education

G. H Raison College Of Engineering, Nagpur

Bachelor of Engineering in Electronics and Telecommunication

2018-2022 | 8.14 CGPA

Project

Name : Q- Checker **Clients** : Airbus, Michelin, Boeing, etc. **Skills** : C++, Java, SQL, Javascript, Git, Tortoise SVN.

Responsibility : Developed an inbuilt Teams channel using C++, Java, and JavaScript to enhance internal communication, integrate with company systems, ensure scalability and security, and optimize cross-platform performance and user experience. **Description** : Created an internal communication platform to enhance team collaboration, ensuring cross-platform functionality. Utilized C++, Java, and JavaScript to integrate real-time messaging, notifications, and internal company systems. Focused on scalability, high performance, and robust security through encryption and authentication. Customized the user interface to align with company branding and iterated on the platform based on user feedback to meet evolving business needs.

Name : Radia Engineering **Clients** : Well Fargo, Vodafone, Siemens, Bank of Baroda, etc. **Skills** : C and C++ Programming, Object-Oriented Programming, Standard Template Libraries (STL), Data Structure, Visual Studio Code, Jira, Git and Github. **Responsibility** : Worked as a C++ developer to maintain end point devices such as agent machines and fixed bugs raised by customers within sprint time. **Description** : Radia Client Automation Software is a comprehensive, industry-leading client manageability solution for automating key IT processes across the PC cycle. It uses foundation of policy-based, desired state automation, which greatly reduces the complexity and effort of maintaining all client devices with the appropriate software, security patches and OS images and all the individual components are consolidated to form Core-Satellite.

Name : Bitlocker Application **Clients** : Vodafone **Skills** : C++ Programming, STL, Data Structure and Algorithm. **Responsibility** : Designed and developed Bitlocker Application focusing on encryption, secure key management and optimising performance for data protection. **Description** : Bitlocker Application is developed for implementing data encryption algorithms, optimising performance, ensure secure key management and user authentication, collaborating on system requirements and architecture, conducting through testing and debugging and providing technical documentation.

Name : Lifeguard System - Zebra Technology(Onsite) **Clients** : Motorola **Skills** : C++ Programming, STL, Python Programming. **Responsibility** : Designed, build, and maintained high-performance, reusable, and reliable Swift and Objective-C code. **Description** : Ensured application quality and responsiveness through comprehensive iOS development, including unit testing for robustness and ongoing bug fixing. By collaborating with cross-functional teams, define, design, and ship new features, and continuously discover and implement new technologies to maximize development efficiency. Translated designs into high-quality code, manage version control with GIT, track progress with JIRA, and have successfully published apps on the App Store.

Technical Skills

- C, C++ Programming Language
- Java Programming Language
- Object Oriented Programming
- STL
- Data Structure
- Algorithms
- Testing and debugging
- HTML and XML

Operating Systems

- Linux
- Windows

Tools Used

- Visual Studio Code
- Pearl
- Cmake
- ALM
- Git and Github
- Tortoise SVN
- Jira
- Slack

Certifications

- AZ - 900 Microsoft Azure Fundamentals Certification
- GenAI Assisted Coding Using Amazon CodeWhisperer.
- Azure Cloud Engineer Developer
