Project:

Quiz Game Application

- Developed Quiz game application using C in a Linux environment.
- Designed to help users enjoy quiz games according to their own choice of interest.
- Enable user to create accounts, play the game in 2 stages, view their scores.
- Implemented authorization controls to ensure only authorized employees could manage users and quiz questions.
- Utilized **Linked lists** for dynamic data management for user accounts.
- Employed **File Handling** for efficient data storage and retrieval.
- Used **C structures** to organize and manage data for users.

ACADEMIC PROJECT

Automatic Number Plate Detection for Motorcyclist Riding Without Helmet

This project proposes an automated system for detecting motorcyclists not wearing helmet and retrieving their motorcycle number plates from CCTV footage image. Here we propose a methodology for full helmet detection and license plate extraction using YOLOv2, YOLOv3 and OCR.
