

ILENI NAVANEETH REDDY

✉ Navaneethreddy14@gmail.com ☎ 8074532495 📍 Hyderabad, India

Summary

"I am a recent graduate with a strong interest in software development. I have skills in C, C++, and Linux. I have completed an embedded systems course, which prepared me for a career in embedded software engineering. I am hard-working and eager to use my skills to contribute to a software development team."

Education

Bachelor of Technology in Electronics and Communication, <i>S.R University, Warangal</i> CGPA: 6.58/10	06/2020 – 05/2024
Intermediate (MPC), <i>Alphores Junior College, Karimnagar</i> CGPA: 9.0/10	06/2018 – 04/2020
Secondary School Certificate (SSC), <i>Ratnam Global School, Karimnagar</i> CGPA: 9.0/10	06/2017 – 04/2018

Technical Skills

Programming Languages C, C++, Embedded C	Operating Systems Linux
Tools Keil IDE, Proteus	Protocols CAN, SPI, UART, I2C
Microcontrollers & Architectures ARM7	IoT Platforms Arduino, ESP32
Development Environments Visual Studio Code, Arduino IDE	

Projects

Password authenticated touch screen based device control system Designed and implemented a device control system featuring a resistive touch screen with password authentication for secure access. Specific touch areas, such as corners or designated regions, were programmed to activate various device controls. Passwords were stored in EEPROM to ensure non-volatile and reliable data retention. The system ensures intuitive control and enhanced security for device operations.
IOT Enabled Smart Health Mask Developed a smart mask using Arduino UNO, ESP32, and C programming. The Arduino UNO is used to interface with the LM35 temperature sensor and control the buzzer, while the ESP32 handles communication and processing tasks. The system detects the person in front of you and checks if their body temperature exceeds 98°F (37.8°C). If the temperature is higher, it triggers a small buzzer as an alert, helping to monitor health.

AIML Algorithms

Used machine learning algorithms such as Convolutional Neural Networks (CNNs), Random Forest, and Support Vector Machines (SVM) for skin disease classification through image analysis. Automated the diagnostic process, improving accuracy and enabling early detection of conditions like eczema and melanoma, thereby enhancing healthcare diagnostics and supporting medical professionals in making informed decisions.

Publications

Asia Pacific Conference on Innovation in Technology (APCIT 2024)

01/12/2023

Published in 2024

Certifications

- Introduction to C- Coursera
- Introduction to Internet of Things and Embedded Systems - Coursera
- Architecting Smart IoT Devices - Coursera

TRAINING AND CERTIFICATIONS

Embedded Systems Course, Vector India, Hyderabad

06/2024 – 12/2024

- Good knowledge on SQL
- Acquired fundamental knowledge of C, C++, and Linux.
- Good communication skills

Soft Skills

- Strong communication and teamwork skills
- Good problem-solving and analytical skills
- Quick learner with a passion for software development

Declaration

I hereby declare that the information provided above is true to the best of my knowledge and belief.
