Education

GITAM Institute of Technology, Visakhapatnam

B.Tech in Computer Science (AI/ML)

2022 – 2026

CGPA: 8.14/10

Technical Skills

Languages: Java, JavaScript, Bash, Python

Backend: Node.js, Express.js

Cloud & DevOps: AWS (EC2, VPC, IAM, S3, EKS, ECR), Docker, Kubernetes, Helm, Git, Jenkins

Configuration & IaC: Ansible, Terraform

Databases: MySQL, MongoDB

Operating Systems: RHEL, Amazon Linux

Experience

MeetCrow — Web Developer Intern ([link](#))

Remote | May 2025 – June 2025

- Developed a responsive React-based documentation website, leveraging GitHub Copilot to accelerate development.
- Deployed the application on AWS Elastic Beanstalk for scalable and managed frontend hosting.

Unical Systems — Python Intern ([link](#))

Hyderabad (Onsite) | May 2024 – June 2024

- Built a web-based data visualization dashboard using HTML, CSS, JavaScript, and Django to analyze structured datasets.
- Implemented Excel/CSV upload functionality and generated dynamic bar and pie charts with Matplotlib.

Projects

1. Roboshop — Cloud-Native E-Commerce Microservices Platform ([link](#))

Linux, Shell Scripting, Terraform, Ansible, Docker, Kubernetes, Helm, Jenkins, AWS (EKS, ECR)

- Developed infrastructure for an 11-microservice e-commerce platform for selling robotic products.
- Provisioned AWS resources using Terraform and automated server configuration with Ansible and shell scripts.
- Built and optimized Docker images (50–60% size reduction) and pushed them to Docker Hub/ECR.
- Orchestrated containers on AWS EKS using Helm charts and implemented CI/CD pipelines with Jenkins.

2. Brain Tumor Classification — Capstone Project (AI/ML) ([link](#))

Python, TensorFlow/Keras, EfficientNetB0, DenseNet121, ProtoPNet, OpenCV

- Implemented a multi-model ensemble approach for accurate brain tumor classification from MRI images.
- Utilized two black-box deep learning models — EfficientNetB0 and DenseNet121 for high classification performance.
- Integrated ProtoPNet as an ante-hoc explainable AI model to provide interpretable prototype-based predictions.
- Developed a tumor localization mechanism using OpenCV to highlight affected regions in MRI scans.
- Achieved 92% training accuracy and 87.7% testing accuracy

3. Course Delivery System — Full Stack Team Project ([link](#))

React, Node.js, Express.js, MySQL, Tailwind CSS, AWS Elastic Beanstalk

- Collaborated in a team to develop a web platform for managing courses, faculty profiles, and student feedback.
- Implemented user authentication, authorization (restricted to college email), and backend-database integration using JavaScript.
- Deployed the full-stack application on AWS Elastic Beanstalk for scalable hosting.

Certifications

- AWS Certifications (Coursera) — [Link](#)
- Google Cloud Computing Basics — [Link](#)
- Object Oriented System Development using JAVA — [Link](#)
