PROFESSIONAL SUMMARY

C++ Application Developer with 2.6 years of experience in C/C++ and Linux application development. Skilled in OOP, STL, multithreading, memory management, debugging, and embedded/Linux systems. Experience in developing, optimizing, and maintaining control and data processing applications with focus on performance, reliability, and system-level programming.

PROFESSIONAL EXPERIENCE

Engineer – L&T Technology Services, Mysore

Sep 2023 – Present

Data Logger

- Designed and developed a data logger application using C/C++ on Linux platform (Linux application development, embedded Linux).
- Applied OOP concepts (classes, objects, modular design) to develop maintainable and scalable code. Implemented RTC functionality for date/time management (real-time data logging, timestamp handling).
- Used SQL database for data storage and retrieval (database integration, data persistence).
- Performed debugging and troubleshooting (performance optimization, bug fixing).
- Used Linux commands for file handling, builds, and process management (Linux system programming).
- Used Git version control for commits, branching, and merging (collaborative development).
- Improved application reliability and performance through debugging and optimization.

Thermal Controller Application

- Developed a C++ control application for managing detector temperature and humidity (Linux application development, embedded systems, control systems).
- Performed M35 scripts testing using M35Test tool in Linux environment (testing, validation, system verification).
- Applied OOP concepts to structure control logic and sensor handling (modular design, software architecture, maintainable code).
- Developed reusable classes for sensor monitoring, threshold evaluation, and system state management (code reusability, real-time monitoring).
- Performed debugging, unit testing, integration testing, and optimization in Linux environment (performance tuning, troubleshooting).
- Used SVN version control for collaborative development (source code management, version tracking).

Tools & Technologies

Linux, Embedded Linux, STM32CubeIDE, MCUXpresso, Visual Studio Code, WSL, Git, SVN, M35Test, SQL, Linux Development Tools

SKILLS

- C & C++ Programming: OOP, STL, Templates, Pointers, References, Operator Overloading, Memory Management
- Linux Development: Multithreading, Synchronization, POSIX Threads, System Calls, Shell Commands, Linux System Programming
- Version Control: Git, SVN, Source Code Management, Branching, Merging
- Testing & Debugging: Unit Testing, Debugging, Troubleshooting, Performance Optimization
- Data Structures & Algorithms: Linear Data Structures, Algorithm Basics, Problem Solving

EDUCATION

Bachelor of Engineering (Computer Science and Engineering)

Government College of Engineering, Salem.

ACHIEVEMENTS

- Selected as a Siemens Scholarship Program candidate through merit-based evaluation
- Completed structured technical and professional training aligned with industry practices
