EDUCATION

National Institute of Technology, Kurukshetra

B.Tech in Information Technology | CGPA: 8.0

2021 – 2025

EXPERIENCE

Backend Engineer – Apeing DEX | Remote (USA)

Aug 2025 – Present

- Designed and developed low-latency backend services for a real-time decentralized trading platform.
- Built WebSocket-based streaming systems for live market and blockchain events, supporting hundreds of concurrent users.
- Optimized async pipelines to reduce event delivery latency and improve system responsiveness.
- Implemented secure REST APIs using JWT authentication and role-based access control.
- Improved throughput and fault tolerance for high-frequency workloads through efficient resource utilization.
- Integrated blockchain transaction data with backend analytics to enable real-time (<1s) trading insights.

Blockchain Developer (Contract) – Amalas | Remote (UAE)

Jul 2025 – Sep 2025

- Developed and deployed gas-optimized Solidity smart contracts for a decentralized education platform.
- Implemented wallet authentication, secure transaction flows, and on-chain access control.
- Integrated smart contracts with backend and frontend services using Web3.js.
- Conducted smart contract security reviews and gas optimization.

PROJECTS

Solana WebSocket Service – Real-Time Blockchain Event Streamer

Rust, Tokio, Solana RPC, WebSockets

- Built a high-performance WebSocket service optimized for low latency and high concurrency.
- Designed event-driven async architecture using Tokio runtime and broadcast channels.
- Implemented auto-reconnect, graceful shutdown, and structured JSON messaging.

- Maintained stable performance during traffic spikes using fault-tolerant broadcasting.

Beneficiary Tracer API – Ethereum Transaction Analytics

Go, Gin, REST API, Ethereum

- Developed a low-latency REST API to analyze Ethereum addresses and trace transaction beneficiaries.
- Optimized transaction aggregation and normalization for analytics workloads.
- Designed scalable architecture ready for pagination, caching, and third-party API integration.

SKILLS

Programming Languages: Rust, Go, Python, JavaScript, C++, Java

Backend & Systems: REST APIs, WebSockets, Async Programming, Microservices, Event-Driven Architecture, Linux Internals

Blockchain: Ethereum, Solana, Solidity, Web3.js, Ethers.js, IPFS, Layer-2 (Polygon, Arbitrum, zkSync)

Databases & Messaging: PostgreSQL, MySQL, MongoDB, SQLite, Kafka

Security: JWT, OAuth2, API Security, Smart Contract Security

DevOps & Tools: Docker, Git, CI/CD, Linux

Frontend: TypeScript, React, Next.js

RESEARCH

Secure Genetic Data Storage Using Blockchain & Homomorphic Encryption

- Proposed a privacy-preserving system combining Blockchain and Fully Homomorphic Encryption (FHE).
- Designed role-based, on-chain access control for sensitive genomic data.

ACHIEVEMENTS

- Solved 900+ DSA problems (LeetCode, GFG); LeetCode Rating: 1610.
- Built and deployed 50+ smart contracts on Ethereum testnets.
